MONTHLY COFFEE MARKET REPORT

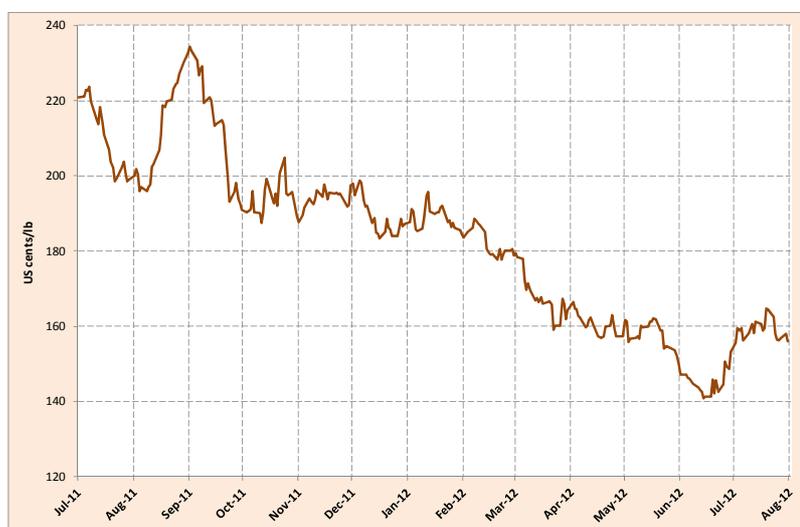

July 2012

Coffee prices rebounded in July 2012, with the ICO composite indicator increasing by 9.5% compared to June, following nine consecutive months of price falls. The strongest growth was seen in Arabicas, fuelled by concerns over the Brazilian crop after unseasonably heavy rains at the beginning of the month. Nevertheless, Arabica prices remain at relatively low levels compared to the last 12 months. Robustas saw more modest growth, increasing by 1.3% to reach their highest level since August 2011.

In terms of market fundamentals, world production in 2011/12 is estimated at 131.4 million bags, falling slightly from 134.4 million bags in 2010/11. World consumption, on the other hand, is estimated to have increased to 137.9 million bags in calendar year 2011. The supply/demand balance therefore remains relatively tight.

World exports in June 2012 reached 9.6 million bags, 5.1% higher than the same month in 2011, bringing the total for the first three quarters of the coffee year (October to June) to 81.2 million bags. This represents a slight decrease of 0.3% on the previous year. Total exports from October to June over the last ten years have increased at an average annual rate of 2%, while consumption has increased at a rate of 2.4%. A brief analysis of exports by selected exporting countries is included in this report.

Graph 1: ICO composite indicator prices
Daily: 1 July 2011 to 1 August 2012

Price movements

The **ICO composite indicator** registered strong growth in July 2012, increasing by 9.5% to reach 159.07 US cents/lb, its highest level in three months (Table 1). This marks a significant turnaround in the trend, following nine consecutive months of falling prices. Graphs 1 and 2 show ICO daily composite indicator and group indicator prices since July 2011. Arabicas have proved the driving force of this recent performance, with the monthly averages of **Colombian Milds**, **Other Milds** and **Brazilian Naturals** increasing by 9.7%, 12.9% and 12.7% respectively.

However, the monthly averages of all three Arabica groups remain at relatively low levels compared to the last 12 months, with macroeconomic concerns still weighing heavily on the market. The monthly average of **Robustas** showed more modest growth, increasing by 1.3% to 107.06 US cents/lb. As a result, there was a strong increase in the differential between Arabicas and Robustas, with the New York to London arbitrage rising by 33.6% (Table 2 and Graph 3).

Market fundamentals

Total production for 2011/12 is estimated at 131.4 million bags, a 2.2% decrease on the previous year (Table 3). This is mostly attributable to the fact that 2011/12 is an off year in the biennial cycle of Brazilian Arabica production. However, this effect has been partially mitigated by strong estimated performance in other exporting countries, such as Vietnam, Peru and Honduras.

More specifically, it is expected that production of Other Milds and Robustas will be higher in 2011/12, with Colombian Milds and Brazilian Naturals registering lower forecasts. Total Arabica production is seen at around 80.9 million bags, and Robusta at a record level of 50.5 million bags. Production is expected to increase in Africa and Asia, by 2.3% and 2.4% respectively, but fall by 2% in Mexico & Central America and by 6.2% in South America.

The 2012/13 Brazilian crop is well under way, with some 40% of the harvest now complete. Excessive rainfall at the beginning of the month is believed to have damaged some of the harvest, particularly affecting the quality of the crop, although the full effects remain to be seen. Most other producing countries will only begin their harvest in the last quarter of the year, when a clearer picture of the 2012/13 crop will become available.

In thousand bags

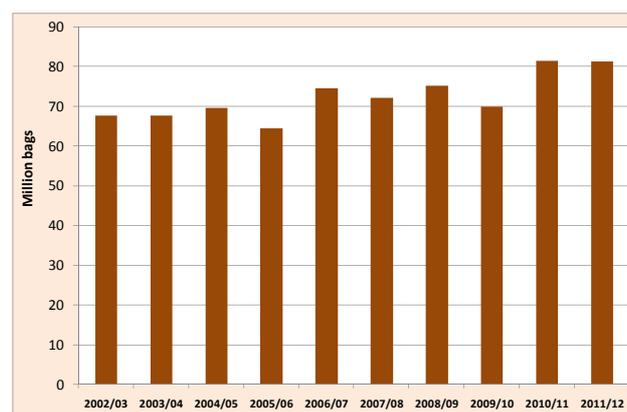

1/ Equatorial Guinea, Guyana, Lao (PDR), Nepal, Sri Lanka, and Trinidad and Tobago

Total exports for June 2012 reached 9.6 million bags, a 6.1% decrease on May 2012 but 5.1% higher than June 2011.

October to June exports

Total exports recorded for the first three quarters of coffee year 2011/12 (October to June) amounted to 81.2 million bags, a slight decrease of 0.3% compared to the previous year (Table 4). However, in historical terms, exports are still at exceptionally high levels (Graph 5).

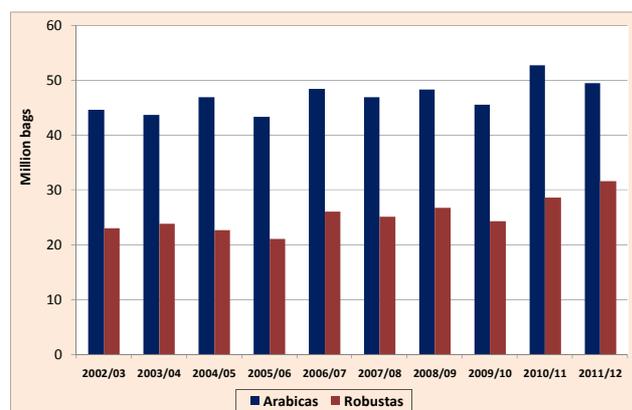

**Graph 5: Total exports of all forms of coffee
(October to June 2002/03 – 2011/12)**

The Annex shows total exports by exporting countries from October to June 2002/03 to 2011/12, and percentage shares by group and by region. Over this time period, world exports have increased at an average annual rate of 2% per year.

In terms of groups of coffee, the strongest growth over the last ten years was recorded by **Robustas**, at an average annual rate of 3.6%. **Colombian Milds**, **Other Milds** and **Brazilian Naturals** grew at an average of -3.9%, 2.7% and 1.8% per annum respectively, resulting in an average growth rate of 1.2% per year for Arabicas as a whole. The percentage share of Robustas in the world total therefore increased considerably, from 34.1% in 2002/03 to 39% in 2011/12, reaching a record level of 31.7 million bags (Graph 6).

Graph 6: Total exports of all Arabica and Robusta coffee (October to June 2002/03 – 2011/12)

This growth was mostly driven by increased exports coming out of Vietnam, which registered average annual growth rates of 8.4% over the time period, to reach a record level of 18.3 million bags in 2011/12. This represents a significant year-on-year increase of 32.3% compared to 2010/11.

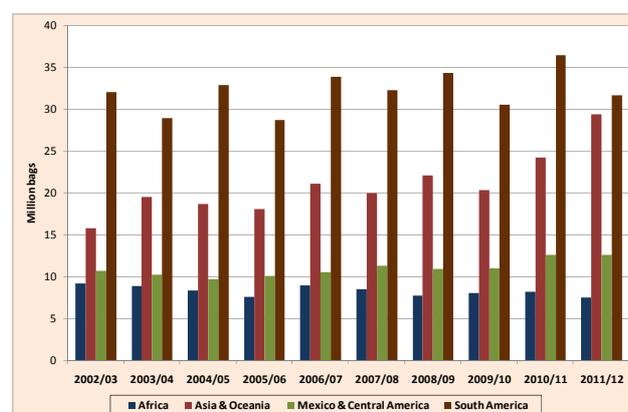

Total exports by region over the time period are shown in Graph 7. Exports have declined in **Africa**, by an average rate of 2.2% a year. Ethiopia is the only major exporter to show an increase in exports over the last ten years. Africa therefore accounts for 9.3% of exports so far in 2011/12, compared to 13.6% for the same time period in 2002/03.

Exports in **Asia & Oceania**, on the other hand, have increased substantially from 15.8 million bags in 2002/03 to 29.3 million bags so far in 2011/12. This is mostly the result of the strong performance by Vietnam, but growth was also recorded in India, Indonesia, Papua New Guinea and Thailand. Asia & Oceania currently accounts for some 36.2% of world trade.

Export performance in **Mexico & Central America** has been more mixed, with Honduras, Nicaragua and Mexico showing growth rates of 7.8%, 5.7% and 2.5% respectively, whereas declines were registered in Costa Rica, El Salvador and Guatemala. The region as a whole grew by 1.9% per annum over the time period, and has a 15.6% share of total exports.

The figures for **South America** are dominated by the Brazilian biennial cycle, which can be seen clearly in Graph 7. However, it is notable that exports in 2002/03, an on year in the cycle, are broadly comparable to those in 2011/12, an off year. Furthermore, Ecuador and Peru have seen strong growth of 10.8% and 6.3% per annum respectively, whereas exports from Colombia have declined.

Graph 7: Total exports of all forms of coffee by region (October to June 2002/03 – 2011/12)

Furthermore, as can be seen in Graph 8, certified stocks of Robusta (on the London futures market) have been falling in recent months, reaching their lowest level in over two years. The combination of considerable supply with drawdown of stocks suggests strong demand for Robusta, and lends support to prices going forward.

Graph 8: Certified stocks in New York and London (August 2010 to July 2012)

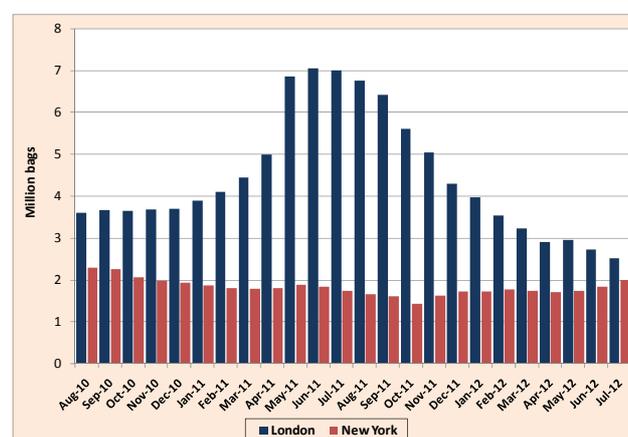

Table 5 shows world consumption over the last four calendar years, which increased to an estimated 137.9 million bags in 2011.

**Table 5: World consumption
(Calendar years 2008 to 2011)**

† Compound Annual Growth Rate

In conclusion, coffee prices rebounded in July, following several months of decline, as unseasonably heavy rains fell in Brazil. However, prices of Arabicas remain at relatively low levels compared to those recorded in 2011, with macroeconomic instability still affecting the market. Robustas, on the other hand, hit an 11-month high in July, despite a record level of exports entering the market, possibly indicating stronger demand for cheaper coffee. Exports for the first nine months of coffee year 2011/12 are roughly on a par with the previous year, with particularly strong performance by Vietnam.
