MONTHLY COFFEE MARKET REPORT

April 2011

Coffee prices, particularly those of Arabicas, reached new highs in April. The monthly average of the ICO composite indicator price in April was 231.24 compared to 224.33 US cents/lb in March 2011, the highest monthly level recorded since June 1977. On the other hand price volatility decreased compared to March. At this time of the year the market traditionally starts speculating about the possible risk of frost in Brazil during winter. However, changes in the location of Brazilian production in recent decades mean that the risk of frost has diminished considerably. Speculative movements driven by the precarious balance between supply and demand accentuated the firmness in Arabica prices during April.

Despite this firmness in prices, the depreciation of the US dollar reduced export earnings of many exporting countries, in particular Brazil, Colombia, Guatemala, India, Indonesia and Mexico. The US Dollar Index, calculated in relation to a basket of six major currencies, fell to 72.93 on 29 April 2011 from 75.83 on 4 April 2011, its lowest level since 22 April 2008 when the level of 71.32 was recorded. Moreover, prices of oil products have continued to rise, further increasing costs of the important production factors in the coffee supply chain, such as transport and fertilizers.

Exports by all exporting countries during March 2011 reached a new high of 10.4 million bags, bringing the cumulative total for the first six months of coffee year 2010/11 (October 2010 – March 2011) to nearly 53 million bags against 45.8 million bags for the same period in coffee year 2009/10, an increase of 15.4%. Total exports during the last 12 months (April 2010 – March 2011) reached 101 million bags, the highest level ever recorded. Encouraged by relatively high prices, exporting countries have increased their exports in the last few months. A brief comparative analysis of exports in the last ten years is provided in this Report.

Graph 1: ICO composite indicator prices
Daily: 1 April 2010 to 5 May 2011

Price movements

The monthly average of the **ICO composite indicator price** rose to 231.24 in April 2011 compared to 224.33 US cents/lb in March, an increase of 3.1% (Table 1). This monthly average is the highest recorded since June 1977 and represents an increase of 82.2% in relation to April 2010. Record price levels were registered in April for the three Arabica groups: **Colombian Milds** and **Other Milds** reached their highest levels since May 1997 and April 1977, respectively, while the price of **Brazilian Naturals** in April was the highest monthly average price recorded since May 1986. In the case of **Robustas,** although the level for April remains firm, the monthly average is lower than that for March 2011. Graphs 1 and 2 show, respectively, daily composite indicator prices and group indicator prices since 1 April 2010. Arabica prices increased during April 2011 leading to a widening of the differential with Robustas. As a result of the considerable increase in prices of Colombian Milds the differentials with the Other Milds and Robustas widened (Table 2). Graph 3 shows changes in the differential between Colombian Milds prices and those of the other three groups since March 2009.

In thousand bags

Market fundamentals

Total production for crop year 2010/11 is estimated at 133 million bags, representing an increase of 8.1% in relation to the preceding crop year (Table 3). Of the ten major exporting countries accounting for over 86% of total production in crop year 2010/11, eight recorded production increases in relation to crop year 2009/10. The countries concerned are Brazil, Vietnam, Colombia, Ethiopia, Guatemala, Mexico, Honduras and Uganda. The two remaining major exporting countries, namely India and Indonesia, recorded reduced production. The fall in Indonesian production is the most significant, however, in view of the greater impact of severe weather conditions. Colombia is slowly recovering from the low production levels recorded in the last three years.

Crop year 2011/12 has already begun in a number of exporting countries, including Brazil, Ecuador and Papua New Guinea. In Brazil, although crop year 2011/12 is an off-year in the biennial cycle for Arabica production, a total crop of more than 43 million bags is expected. Advances in agricultural practices have made it possible to reduce the differences between high and low seasons.

Exports in March 2011 totalled a record level of 10.4 million bags compared to 8.7 million bags in March 2010. The total volume exported in the first six months of coffee year 2010/11 (October 2010 – March 2011) was 52.9 million bags compared to 45.8 million bags for the same period in coffee year 2009/10, an increase of 15.4 % (Table 4). The increase in exports for the first six months of coffee year 2010/11 is largely attributable to shipments of Arabicas, which totalled 35.7 million bags compared to 29.8 million bags for the same period in 2009/10, an increase of 19.6%. Exports of Robustas increased by 7.6%, recording a level of 17.2 million bags for the first six months of coffee year 2010/11 compared to 16 million bags for the same period in coffee year 2009/10. The evolution of exports during the last ten years is examined in the following section.

Analysis of exports by exporting countries

As indicated in the introduction, total exports during the last twelve months (April 2010 – March 2011) reached 101 million bags, the highest level ever recorded. Increased exports seem to have been driven not only by current price levels but also by the continued dynamism of consumption. This brief study will focus on a comparative analysis of exports for the first six months of each coffee year (October – March) during the last ten years.

Total exports during the first six months of coffee year 2010/11 are the highest on record (see Graph 4 and the Annex). Excluding Colombian Milds, during the first six months of coffee year 2010/11 the three other coffee groups recorded the highest levels of exports since 2001/02.

Graph 4: Exports during the first six months of the coffee year (October – March) 2001/02 – 2010/11

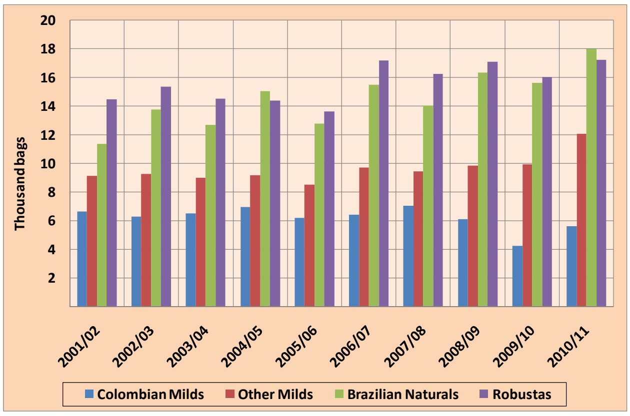

Table 5 shows exports during the period under consideration for the top eleven exporting countries in the current year. Among these countries, total exports in 2010/11 increased significantly in Ethiopia (+104%), India (+65.5%), Colombia (+36.8%), Honduras (+31.9%), Peru (+27.9%), Brazil (+18.9%), and Vietnam (+11.6%). Reduced exports were recorded in Indonesia (-25.8%), Mexico (-18.7%), Uganda (-8.7%) and Guatemala (-3.6%).

In thousand bags

This strong export performance, largely driven by current price levels, is unlikely to favour the immediate reconstitution of stocks in exporting countries. Information provided by Members indicates that the volume of **opening stocks** in crop year 2010/11 is around 13 million bags, a fall of 36.7% in relation to the level of opening stocks recorded in crop year 2009/10 (Table 6). **Inventories** in importing countries are estimated to be around 18.3 million bags at the end of December 2010.

* Estimated

In conclusion, it should be noted that the firmness of prices has encouraged an increase in exports during the first six months of coffee year 2010/11. The level of exports in the period is the highest on record. This strong export performance is likely to delay the reconstitution of stocks in exporting countries. However, current price levels are likely to encourage investment in the upkeep and renewal of coffee trees, although the increased cost of agricultural inputs might be a limiting factor.

Exports during the first six months of the coffee year (October – March 2001/02 to 2010/11)
